

Steps to Update the Password on a Password Protected Page

Last updated: 09/24/2026

STEPS:

1. Go to your "Dashboard".
2. Under "Pages", click "All Pages". Password protected pages are designated.
3. Click on the name of the password protected page to pull up the attributes for that page.
4. The title of your page will be displayed with the "Edit with Elementor" button in the middle. Do not click on "Edit with Elementor" because you are editing the profile attributes of the page and not the text.
5. On the right-hand side of the screen under "Page" click on "Published" in (Blue).

(Note: you may need to click on the split-page icon, immediately to the left of SAVE.)

6. The "Status & visibility" popup will be displayed. At the bottom of this popup, you will find your password. Type in your new password.

Steps to Update the Password on a Password Protected Page

Last updated: 09/24/2026

Note: *You will need to do this with each password protected page. If you make all the passwords for the protected pages the same, users will only need to enter one password for access to all protected pages.*

The screenshot shows a 'Status & visibility' settings panel with a close button (X) in the top right corner. It contains several radio button options for page status: Draft (Not ready to publish.), Pending (Waiting for review before publishing.), Private (Only visible to site admins and editors.), Scheduled (Publish automatically on a chosen date.), and Published (Visible to everyone.). The 'Published' option is selected. Below these is a checked checkbox for 'Password protected' (Only visible to those who know the password.). Under the heading 'PASSWORD', there is a text input field containing the password 'It\$@Gay01dTime!'. A green arrow points to this password field.

7. Be sure to click the “Save” button for your changes to stick.
